

PREETISH UBHRANI

Delhi, India | [+91 9981429495](tel:+919981429495) | ubhranipreetish@gmail.com | [linkedin.com/in/preetish-ubhrani](https://www.linkedin.com/in/preetish-ubhrani) | github.com/ubhranipreetish

SUMMARY

AI/ML engineer and full-stack developer who builds intelligent systems end to end: training and validating models, wrapping them in production APIs, and shipping the interfaces people use. Experience spans agentic AI (LangGraph, RAG), statistical modeling over 3M+ records, realtime multiplayer systems, and hands-on WCAG 2.1 AA accessibility engineering on live products.

EDUCATION

B.Tech in Computer Science & AI — Newton School of Technology, Rishihood University CGPA: 9.667/10.0	2024 – 2028
Class XII — Little Flower Hr. Sec. School 98.0%	2023 – 2024
Class X — St. Francis Hr. Sec. School 93.8%	2021 – 2022

EXPERIENCE

EnableUser — Full Stack Developer Intern Dec 2025 – Feb 2026
Gurugram, India (Remote)

- Implemented source-level WCAG 2.1 AA fixes across fintech and trading platforms, in the codebase, not plugin overlays.
- Wrote semantic HTML, ARIA landmark and widget patterns, and keyboard focus management across React, WordPress, ASP.NET, and Java stacks; built greenfield components that met WCAG 2.1 AA conformance from their first commit.
- Reproduced and resolved defects using NVDA, JAWS, and VoiceOver plus full keyboard-only navigation across flows.

Hotel Red Diamond — Full Stack Developer (Part-time) Jun 2025 – Aug 2025

- Built and deployed a full-stack restaurant POS used live during dinner service, integrating a Kitchen Order Ticket workflow so kitchen staff received, tracked, and processed floor orders through one centralized system.
- Reduced serving time and manual errors during peak hours via real-time order updates coordinating floor and kitchen staff.

PROJECTS

Counterplay — Monte Carlo Cricket Simulation Engine [Live Demo](#) · [Code](#) Python, FastAPI, NumPy, Next.js

- Built an interactive counterfactual sandbox over 18 IPL seasons: override any delivery and watch win probability recompute live.
- Ran 500 Monte Carlo match simulations per request in under 120 ms using fully vectorized NumPy operations on the server.
- Modeled momentum and collapse risk, blending career, venue, and matchup profiles via Laplace-smoothed priors.

Credit Risk Analyzer — Agentic AI Lending System [Live Demo](#) · [Code](#) LangGraph, FAISS, scikit-learn, Llama 3

- Built a stateful LangGraph agent fusing scikit-learn risk scoring with RAG over RBI policy documents, producing cited, self-reflected, audit-ready lending decisions in place of opaque, unexplainable black-box credit scores.
- Achieved a 0.91 ROC-AUC and 92.7% classification accuracy, with sub-5 ms FAISS semantic search over policy chunks.
- Verified every LLM citation against retrieved FAISS context, re-running any decision that scored below 70% confidence.

All Or Nothing — Realtime Multiplayer Gaming Platform [Live Demo](#) · [Code](#) TypeScript, Express, Socket.IO, MongoDB

- Engineered a five-game platform with 6-seat realtime Texas Hold'em on a layered Express/TypeScript backend, keeping every balance server-authoritative and written to an immutable, append-only ledger with running balances.
- Built a framework-free poker state machine (side pots, min-raise reopening, split pots), fuzz-tested for exact chip conservation.
- Decoupled money mutations from Socket.IO pushes via a typed domain-event bus, verified by a 19-check parity suite.

DineX — Multi-Tenant Restaurant Platform [Live Demo](#) · [Code](#) Next.js, Node.js, Express, MongoDB

- Built a B2B/B2C dining platform joining customer reservations to a live POS floor console across 3 roles and 31 REST endpoints.
- Scoped every staff action to its restaurant via multi-tenant JWT; synced table and order state with atomic MongoDB updates.

Flight Delay Analysis — Statistical Data Pipeline [Live Demo](#) · [Code](#) Python, Pandas, SciPy, Statsmodels, Tableau

- Delivered an end-to-end ETL, hypothesis-testing, and BI pipeline over 3M+ US domestic flight records, proving 73.6% of delay minutes are operationally controllable versus just 5.2% attributable to weather across five years of data.
- Fit an OLS model explaining 93.4% of arrival-delay variance; validated a 13.9-minute carrier gap with t-tests and ANOVA.

SKILLS

Languages: Python, JavaScript, TypeScript, SQL, HTML, CSS

AI/ML: scikit-learn, NumPy, Pandas, SciPy, Statsmodels, LangGraph, RAG, FAISS, Sentence-Transformers, Llama 3 (Groq), Monte Carlo simulation, hypothesis testing, regression modeling, model evaluation

Web & Backend: React, Next.js, Node.js, Express, FastAPI, REST APIs, WebSockets (Socket.IO), JWT authentication, Tailwind CSS

Data & Tools: MongoDB, Mongoose, MySQL, Tableau, Matplotlib, Seaborn, Git, Vercel, Render

Engineering: System design, OOD and SOLID, state machines, event-driven architecture, WCAG 2.1 AA, ARIA APG

ACHIEVEMENTS

Solved 300+ LeetCode problems (1550+ rating), 1100+ on Codeforces; shipped 5 flagship systems across AI, data, and realtime.
